

Brock Aeration Sheet for hopper-bottom bins

Engineered and field-tested by BROCK, the hopper Aeration Kit comes ready to install in your bin. Low profile of interior air distribution box means less interference with grain flow.

Six nuts on the fan mount allow easy installation and removal of the fan (fan not supplied by BROCK)—whether the bin is full or not.

Cool or store grain in Brock's holding bins

Now you cool or store grain in any of BROCK's 12 thru 30-foot diameter hopper-bottom bins with the addition of BROCK's Aeration Sheet to the hopper.

By adding aeration to your hopper bin, you can avoid some harvest time binds and:

- temporarily hold wet grain for longer periods of time without hot spots and spoilage;
- use your wet holding bin for cooling dried grain coming directly from the dryer, or

- store dried grain in your hopper bin, thus adding more capacity to your system without adding another bin.

Designed to accept most 12-inch aeration fans, our hopper bin Aeration Sheet will fit new or existing 12, 15, 18, 21, 24 or 30-foot BROCK hopper bins. And, you can add more than one aeration section to your hopper bin to get the air flow you desire.
