

GRAIN WELL DISCHARGE GUARDS

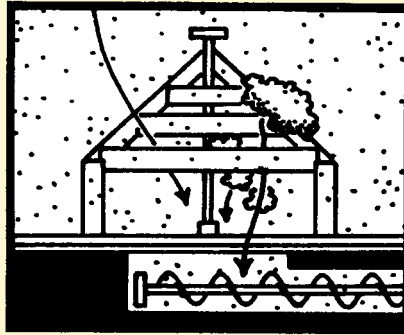

Patent Pending

BROCK WELL-GARD® DISCHARGE GUARD

Discharge Guard for Commercial and Stiffened On-Farm Grain Bins

Cuts or breaks up chunks of grain threatening to block discharge well. Allows grain to flow around chunks of grain that will not break up, moving chunks away from well opening.

Discharge Guard for On-Farm Grain Bins

Brock's unique WELL-GARD® Discharge Guard:

- Helps to maintain a continuous flow of grain out of the bin.
- Limits bridging and blockage caused by chunks of grain.
- Guards the entire area of the well opening.
- Can be mounted directly to Brock's HARVEST-TIME® Sweep to keep grain flowing while eliminating bin entry to install the sweep or remove the discharge guard.
- Is designed to cut or break up chunks threatening to block the discharge well of the bin.
- Also stops chunks that will not break up, allowing grain to continue flowing around them and into the well.

- Is constructed of heavy galvanized, welded steel for a long, rust-resistant life.
- Attaches to the discharge well or sweep to prevent dislodging during bin filling.

Used alone or with a sweep, Brock's WELL-GARD unit provides a simple, inexpensive and safety-enhancing solution to a potentially serious grain handling problem.

Add an optional WELL-GARD® Unit to Brock's HARVEST-TIME® Bin Sweep. When attached to the sweep, the WELL-GARD® Unit simply rotates with the sweep so removal of the discharge guard is not necessary during sweeping.
